

Workplace Safety and Emergency Response Policy

Document owner	Facilities and Risk Management
Effective date	2026-01-01
Review cycle	Annual or after material regulatory/process change
Audience	All employees, contractors, and people managers

Purpose and Safety Principles

The company is committed to maintaining a workplace that protects employees, visitors, contractors, and customers from preventable harm. Every person has authority to stop work that appears unsafe.

Safety practices apply to offices, labs, warehouses, customer sites, company events, and remote work locations where company equipment is used.

Incident and Near-Miss Reporting

Injuries, hazards, property damage, security threats, and near-miss events must be reported through the Safety Portal within 24 hours. Serious incidents involving medical treatment, fire, violence, or regulatory notification must be reported immediately to the emergency contact line and Facilities.

Reports should include location, time, people involved, photos if safe, immediate controls applied, and whether emergency services were contacted. The goal of reporting is prevention, not blame.

Event type	Required timing	Primary channel
Near miss or minor hazard	Within 24 hours	Safety Portal
Injury requiring first aid	Same business day	Safety Portal and manager
Fire, violence, medical emergency	Immediately	Emergency services and Facilities line

Emergency Evacuation

Employees must follow posted evacuation routes and assembly point instructions. Elevators must not be used during fire alarms unless emergency responders instruct otherwise.

Floor wardens confirm evacuation zones, assist visitors, and report missing persons to emergency responders. Employees should not re-enter a building until cleared by Facilities or local authorities.

Ergonomics and Remote Work Safety

Employees working remotely should maintain a safe workspace with adequate lighting, stable internet, secure equipment placement, and ergonomic seating. The company may provide ergonomic assessments for employees with recurring discomfort.

Electrical cords should be managed to avoid trip hazards. Company devices must be stored securely and protected from heat, liquids, and unauthorized access.

Visitors, Contractors, and Restricted Areas

Visitors must sign in, wear badges, and be escorted in non-public areas. Contractors performing maintenance, electrical, construction, or lab work must provide required permits, insurance, and method statements before work begins.

Restricted areas may require badge access, safety training, personal protective equipment, or written authorization. Tailgating into secured areas is prohibited.

Corrective Actions and Training

Facilities and Risk Management assign corrective actions after incident reviews. Action owners must complete remediation by the agreed due date or escalate blockers.

Employees must complete annual safety training and any role-specific modules, including fire safety, lab safety, first aid, equipment handling, or travel safety where applicable.
